

Street Smart Technologies, the San Diego-based subdivision of Honeywell and the inventor of multiple short-range wireless technologies, has released its latest presentation remote with integrated memory drive.

The **Power Presenter Plus** is the most powerful presentation tool available on the market. Anyone that uses PowerPoint® software can now mobilize their presentations. In addition to Microsoft's PowerPoint®, the Power Presenter Plus works with most major presentation software programs. It is just the tool that any presentation user needs to obtain a mobile advantage. Beyond simple convenience, the **Power Presenter Plus** allows users to download presentations directly into the unit's compact receiver.

The **Power Presenter Plus** is the smallest wireless remote that advances presentation slides. It has simple forward, reverse, blank and laser pointer buttons. This wireless technology has 4 billion codes of encrypted signals, which prevents interference from other wireless devices, including the same device used side-by-side. The receiver is a true plug and play device that does not need software or setup. It works with most personal computers and has a battery life of 12 months on average. The range is over 100 feet, which means you can use this in an auditorium.

The most impressive feature is its 32Mb onboard memory that adds a portable drive to your computer. Its usefulness is not limited to saving presentations. The drive can be used to save files for sharing or backup. **Power Presenter Plus** users can pack and save their presentations multimedia files for future editing in other computers. You can even load Microsoft's executable presentation files to show your presentations directly from this portable drive.

Traveling to make a presentation can now be as simple plugging the **Power Presenter Plus** into any existing PC. "Many of today's executives and presenters are looking for way to minimize their travel weight. We can see where this device can really mobilize traveling trainers and presenters in a very efficient manner." Miguel Vasquez, Director of Marketing.

From conference rooms to classrooms the **Power Presenter Plus** is rapidly becoming the product of choice for presenters worldwide. For additional information on this product access the company's website at www.powerremote.com

Street Smart Technologies is a wireless subdivision of Honeywell, headed by an innovative executive team. The San Diego-based company is the inventor of multiple short-range wireless technologies enabling secure, encrypted communication/control between wireless products. Under its own brand, and through OEM agreements, Street Smart Technologies designs and manufactures products for a wide range of industries and uses, including home and garage security systems interface, emergency medical pendants, PC based remotes for un-tethered Power Point presentations, RV braking systems and lighting systems. Honeywell is a diversified technology and manufacturing leader, serving customers worldwide with aerospace products and services; control technologies for buildings, homes and industry; turbochargers; automotive products; specialty chemicals; fibers; and electronic and advanced materials. Based in Morris Township, N.J., Honeywell is one of 30 stocks that make up the Dow Jones Industrial Average and is a component of the Standard & Poor's 500 Index. Its shares are traded on the New York Stock Exchange under the symbol HON, as well as on the London, Chicago and Pacific Stock Exchanges.
